Description	• Window Patching. The machine applies transparent or plastic films (0.02 to 0.35 mm thickness) from reels onto folding carton or corrugated board blanks. • Pick & Place Module (PP). Rotary arms equipped with grippers and suction cups precisely place rigid or pre-cut components. This system handles rigid windows, 360° panoramic windows, handles, reinforcements, or trays (such as for Digipak cases). • Gluing System. It typically integrates cold glue units (rubber cylinder activated by infrared sensors) as well as Hot Melt adhesive tanks to secure rigid inserts. Typical Technical Specifications • Blank Formats. Handles blank lengths ranging from approximately 120 mm up to 1,020 mm or 1,048 mm, depending on the configuration (1, 2, or 3 lanes). • Production Speed. Reaches up to 20,000 pieces per hour in reel-fed window patching mode (1 lane) and up to 10,000 pieces per hour in Pick & Place mode (pre-cut elements). • Applications. Used for manufacturing luxury folding cartons (cosmetics, wines, and spirits), promotional boxes, windowed food packaging, and multimedia sleeves.
